HIV reported began in April 2006.

* Classification is based on the patient's gender as reported.

** Classification at time of HIV infection diagnosis if patient met the HIV case definition (otherwise age at first HIV report).

*** 1 patient was diagnosed with HIV infection as an adult but has evidence of being HIV infected as a child.

It is counted as an adult/adolescent case in tables 1, 2, and 3; and as a pediatric case in table 4.

Table excludes previously reported as HIV cases but seroconverted to AIDS - such cases are included in the AIDS Tables.

Note: Counts exclude cases diagnosed, but not yet reported as of March 31, 2009 and may understate the number of diagnoses and deaths in the most recent years.
